

Things we did this week (10/28-11/5):

- Basic framework of our website has been implemented into code
 - Home, message board, routes, login and register
 - For message board and routes, they are just placeholders right now - they still need to be given their features
- Database has been imported and have started going through the data
 - index.js has been created and started to be implemented
 - create.sql has been made
- Troubleshooted issues with docker and .env files
- The team had good communication and collaborated well!! yay!

Things we need to do this week:

- filter database to just have the necessary info in our create.sql/insert.sql
- Routes page
- Message board page
- Fix route to the home page in index.js
