

- Ollie:
  - Made a “really ugly” version of the message board with sample messages and it has the functionality to reply and you can delete messages (if there are children messages they get deleted)
- Brie:
  - Updated the message board to make it look cleaner by using css and the add message is a little pop up form now
- Arielan:
  - Task was to figure out how to insert the data from the github we found
  - Used jq to make the data into an insert
  - Wrote a python script to filter out things that didn't work
  - Docker was having an issue but Kristin helped with that
  - When Docker is running, you can see it's doing the insertion properly
- Kristin:
  - First did the adding table creation for the reviews in anticipation of that being implemented
  - Worked on the user permissions for the message board, so that it's disabled all the functionalities of the page if you're not logged in
  - Once logged in, you can add messages and reply and delete things you added
  - Figured out the data type issue when inserting data
- Suhani
  - Did routes page to get the card format
  - Need to make it look cleaner
  - Updated routes.hbs and index.js
- Next Week:
  - **Admin User Development**
    - Create an admin user role with permissions to delete reviews and messages, giving moderators greater control over user-generated content.
  - **Route Page Enhancements**
    - Add images to the routes page to make it visually engaging.
    - Improve overall styling and layout for a more cohesive user experience.
  - **Search & Filter Functionality**
    - Implement search and filtering capabilities on the routes page, allowing users to easily find specific routes based on location, difficulty, and other criteria.
  - **Extended Route Features**
    - Enable users to leave reviews on individual routes.
    - Add functionality for users to suggest or add new routes directly to the database.
