- Ollie
    - Got the filter working for our routes page, and can now filter through based on what they are looking for
    - The user can choose to enter in stuff for all of the fields or leave some blank based on what they are looking for
- Brie
    - Did more css for the message board and the routes page
        - There's lines that show what message is replying to what
        - The main messages are in their separate cards
        - Added photo and the title, changed the buttons an added photos and stars to the routes page
- Arielan
    - Add routes function for the users!
    - The form requires certain information to be filled out for it to submit
- Kristin
    - Worked on the user level authentication
        - You can't add routes or add messages when you aren't logged in
        - Set up an admin account
            - Can manage messages for any user to monitor content
- Suhani
    - Added ratings field to the routes
    - Modified the routes table in the database to account for this
- Next Week:
    - Implement a user review submission feature to complement the rating system.
    - Continue styling refinements on the routes page, including better spacing, layout alignment, and image additions.
    - Enable users to click on a route's card to view an expanded detail page showing all the information about the route, including name, grade, route type, safety rating, area, first ascent, coordinates, and aggregated user reviews.
    - Need to finish the github readme - instructions, how to run tests, and link
        - For the extra credit make a branch for the cybersecurity class submit by November 30th
