- Ollie
    - Worked with database, home page partial, and put together the create.sql
- Arielan
    - Worked on the login and register, small changes to package.json make sure the docker worked
- Brie
    - Worked on the footer partial, index.js, messages partial
- Kristin
    - Worked on the header and title partials, name of the app is in the tab, if logged in it will show the username, did some troubleshooting on the index.js to make sure all the messages displayed correctly and to get the image path to show up
- Suhani
    - Worked on the navbar handlebar and logout
- Overall this week
    - Good job with the branches and committing throughout the week
    - Good job keeping the project board up to date
- Next week
    - Get insert working with all the data from our routes, gone through it and picked the relevant data
        - Need to figure out how to get 1000 datum to be in the format we want
        - Filtering the database
            - Is there any way to do it all at once - to get rid of the things we don't need?
                - Use the tool jq
                - Like grep but for json
    - Get messages and routes pages working
    - Let users add and rate routes
    - Make sure that our user stories and project board is good
